

Developing procurement competence... E-Learning

Industry Sector: Telecommunications and Electronics
Location: International
Client: **Global Telecommunications & Electronics Manufacturer**

Challenge

A global telecomms and electronics manufacturer needed to establish a base level of technical knowledge across its supply chain function of nearly 500 people in 26 countries.

Approach

All staff were given access to the PMMS e-learning suite which was parked on the organisation's own learning platform.

Staff were encouraged to improve their competence profile through a 12 month self paced learning programme.

Benefits

As well as achieving a base level of competence, our work allowed the organisation to focus workshops and webinars on practical application rather than knowledge transfer saving both staff time and focusing learning on demonstrable business results rather than knowledge for its own sake.

A key factor in delivering such benefit is that PMMS e-learning is focused around a sourcing process rather than in the academic silos so often seen in e-solutions of this kind.
